2. General aim.....	5
3. GENERAL GUIDELINES FOR WORKSHOP	7

1. TERMS OF REFERENCES FROM APPLICATION FORM

ACT. 5.2 Restoration actions supporting endangered species

Activity number	2
Title	Restoration actions supporting endangered species
Description	Soft restoration tests and actions will be implemented by relevant PPs. In P3 the extension of the MPA and soft restoration related to coastal ecosystem will be considered. In P2 the feasibility of restoring Spartina maritima vegetation will be explored. In P7 and P10 UNIMOL plans local restoration actions about coastal and wet habitats and erosion in collaboration with local authorities. IRB will develop restoration actions for identified threats to and losses of habitats and endangered species in P8. IOF will propose measures for prevention of further degradation of the studied ecosystem in P4 and P6. Sea and Karst proposes measures for restoration of the studied ecosystem in P9. This activity will include stakeholders engagement and capacity building for the implementation of restoration actions.
Start date	01/10/2020
End date	31/12/2022
Activity deliverables	D5.2.1 [PP in charge: UNIBO; delivery: M36] Report on implemented restoration test and soft actions supporting endangered species, with the contribution of all PPs [PP in charge: Delta2000; delivery: M36] Organization of at least 2 workshops (also virtual) for each Pilot for stakeholders engagement (at least 15 participants for each workshop) and capacity building on restoration actions supporting endangered species. Workshops will be organized by Delta2000 in collaboration with the PP leading and participating to each Pilot
Activity budget	€ 230.835,00

ACT. 5.3 Integrated costal/marine management system

Activity number	3
Title	Integrated coastal/marine management systems
Description	For each Pilot, relevant partners develop best practice of LSI/ICZM/MSP and water/coastal/marine integrated management plans. UNIBO (with ARPAE) optimizes management activities and tests them in P2. Active involving of local stakeholders in a Local Marine Forum – LMF is performed in P2. IUAV upgrades and tests indicators on land sea interaction and MSP and applies them in several pilots (e.g. P1, P5). ARPA FVG/IRB define guidelines for maintaining the monitoring efficiency on P1 and P8. City of Nin/IOF develop an integrated management system for P6. Regione Puglia/UniSalento/CMCC produce guidelines for protection and management of P3. UNIMOL develops the integrated management plan for P7. UniMolise develops coastal-marine integrated management plan for P10 with Authority Management of MPA Torre Cerrano. Sea and Karst proposes measures for achieving sustainability in ICZM of P9. Regione Marche proposes an integrated management system for P11.
Start date	01/12/2020
End date	31/12/2022
Activity deliverables	D5.3.1 [PP in charge: IUAV; delivery: M36] Report on Integrated coastal/marine management systems implemented in relevant Pilots by involved partners, with the contribution of all PPs D5.3.2 [PP in charge: Delta2000; delivery: M36] Organization of at least 2 workshops (also virtual) for each Pilot for stakeholders engagement (at least 15 for each workshop) and capacity building on integrated coastal/marine management systems.
Activity budget	€ 404.550,00

2. General aim

The aim is to involve the stakeholders through workshops for the following aims:

- (act. 5.2) to enhance stakeholders engagement and capacity building for the implementation soft restoration tests and actions implemented
- (Act. 5.3.) to enhance stakeholders engagement and capacity building for the development of best practice in LSI/ICZM/MSP and water/coastal/marine integrated management plans

Project partners have to realize n. 2 workshops for sites involved, with at least n.15 participants, also on line.

Activity	Pilot site involved / Partner involved	Timing
Act. 5.2. Restoration actions supporting endangered species		
D.5.2.2. Realization of n.2 workshops for partners involved in the pilot, involving at least n. 15 stakeholders to enhance stakeholders engagement and capacity building for the implementation of soft restoration tests and actions	<p>Pilot P2: / PP UNIBO (with ARPAE) - feasibility of restoring Spartina maritima vegetation will be exploited</p> <p>Pilot P3 / PP Regione Puglia/UniSalento/CMCC extension of the MPA and soft restoration related to coastal ecosystem</p> <p>Pilot P4 / PP Neretva river mouth; IOF, DNC; CMCC measures for prevention of further degradation of the studied ecosystem</p> <p>Pilot P6 / PP City of Nin/IOF measures for prevention of further degradation of the studied ecosystem</p> <p>Pilot P7 / PP UNIMOLISE plans local restoration actions about coastal and wet habitats and erosion in collaboration with local authorities</p> <p>Pilot P8 / PP IRB - develop restoration actions for identified threats to and losses of habitats and endangered species</p> <p>Pilot P9 / PP Sea and Karst, identification of measures for restoration of the studied ecosystem</p> <p>Pilot P10 / PP Unimolise plans local restoration actions about coastal and wet habitats and erosion in collaboration with local authorities</p>	n.2 WORKSHOPS You could realize the workshops before, during or after soft restoration actions supporting endangered species. (We suggest – not compulsory – to realize the 1st workshop during the planning of actions/ before soft restoration actions and the 2 nd workshop after the activities realizations.) By the end of project – Month n. 36
Act 5.3 Integrated coastal/marine management systems – D.T. 5.3.2		
D.5.3.2 Realization of n.2 workshops for partners involved in the pilot, involving at least n. 15 stakeholders to include stakeholders engagement and	<p>PILOT P1: PP ARPA FVG upgrades and tests indicators on land sea interaction and MSP and applies them in several pilots and define guidelines for maintaining the monitoring efficiency</p> <p>PILOT P2: PP UNIBO (with ARPAE) optimizes management activities and tests them</p>	n.2 WORKSHOPS You could realize the workshops before, during or after developed best practice of

<p>capacity building for the developed best practice of LSI/ICZM/MSP and water/coastal/marine integrated management plans</p>	<p>PILOT P3/ PP Puglia Region/UniSalento/CMCC guidelines for protection and management of site</p> <p>PILOT P5/ PP IUAV upgrades and tests indicators on land sea interaction and MSP and applies them in several pilots</p> <p>PILOT P6/ PP City of Nin/IOF develop an integrated management system</p> <p>Pilot P7 / PP UNIMOL integrated management plan</p> <p>PILOT P8/ PP IRB define guidelines for maintaining the monitoring efficiency</p> <p>PILOT P9/ PP Sea and Karst measures for achieving sustainability in ICZM</p> <p>PILOT P10/ PP Unimolise develops coastal-marine integrated management plan for P10 with Authority Management of MPA Torre Cerrano</p> <p>PILOT P11/ PP Marche Region integrated management system for the site</p>	<p>LSI/ICZM/MSP and water/coastal/marine integrated management plans (We suggest – not compulsory – to realize the 1st workshop during the planning of actions/ before the actions realization and the 2nd workshop after the activities realization.)</p> <p>By the end of project – Month n. 36</p>

P9: Cetina river mouth (HR); PP: Sea and Karst

P10: Torre del Cerrano, Pineto Abruzzo (IT); PP: UNIMOLISE P11: Marche coastal area (IT); Regione Marche

3. GENERAL GUIDELINES FOR WORKSHOP

3.1 EVENTS ORGANIZATION

Some suggested steps -before the event:

- Participants should be recruited from various groups of stakeholders: workshops have to be customized and defined taking in consideration the target groups identified and activities realized;
- definition of an invitation list: type of subjects, bodies involved and their role;
- definition of a programme/agenda and a date for the workshop (preferably send a “save the date” first): please remember to use always project and programme identity / logos;
- Considering the type of event, it is suggested/it could be needed the presence of a facilitator / moderator;
- The connections of events with the pilot sites involved in CASCADE project and in the activities realized or planning in the sites (As in the table above, cfr. Act. 5.2 and /or Act. 5.3) is pivotal: the workshops have to be organized taking in mind the aim.

Some suggested steps -during the workshop :

- 1st workshop: It should include the presentation of the CASCADE project in the beginning;
- Take in mind guidelines for the content and themes of event;
- Take note and take pictures/video to prepare the minutes / follow up report of each workshop;
- Workshop should give floor to the participants to give feedback: during the workshop the inputs, participatory process, involving of participants is more important to better define and finalizing the activities.

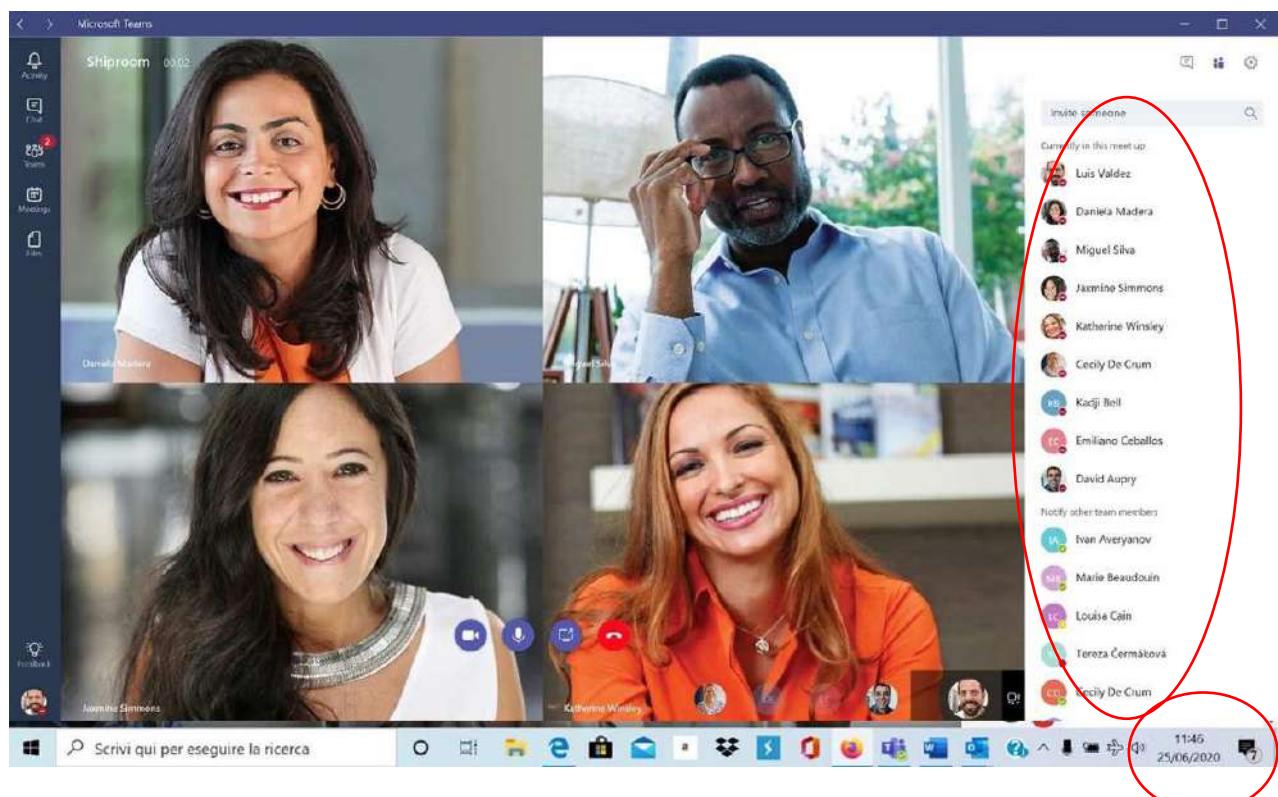

3.2 ON-LINE EVENTS – MINIMUM REQUIREMENTS

In relation to the current period of pandemic emergency situation related to the Covid-19 and the impossibility of the projects to implement the traditional off-line events in presence both on local, national and cross-border level, at the Programme level are set the following **minimum communication requirements** for the organization of the **on-line workshop**.

Here following some suggestions that you could consider related to the dimension of the workshop.

As minimum, in case of workshop on line, the compulsory minimum requirement is

- Picture of participants with stamp screen or using phone/camera, with evidence of date and hour and list of participants

Other suggestions, not compulsory:

- If possible, record the workshop on line, with the consent of all participants, according to the law;
- Engagement of the well-identified and motivated target groups by means of activities carried out on social media (i.e advertising segmented per users groups);
- Adequate online promotion and information about the event (pre-event and post-event);
- Assure the presence of the moderator of the event and of the coordinator of the chat box (regia);

- Proactive communication during the event by means of i.e. live-tweeting (using the pre-event defined hashtag and aimed at creating the trending topic on Twitter and other social);
- Adequate graphic composition for the layouts of the background scenes (with project(s) logos and/or coordinated visual identity of the specific event) of speakers going live in interviews in hybrid modality – speaker(s) and moderator onsite and the audience online in streaming;
- Plan the moments for the online interaction with stakeholders by means of interactive features and/or by foreseeing and launching an interactive and creative quiz of knowledge verification. Example of tools could be Miro board, Mentimer, etc.
- Video-conference set-up should be planned and carried out using the professional communication platforms with availability of features for the interaction with participants (raising hand, chatbox etc.)

3.3 FOLLOW-UP REPORT OF WORKSHOPS

As you know, for each event including the workshops you have to use the “Event follow up template” provided by LP available in the Project repository in the Section WP 2 Communication – Event report.

Following the template, you have to provide the information required as the typology of the audience present, in case of both online and offline events, and setting up the description of each of the speakers’ presentations and main conclusions of the discussion that took place. Also some relevant photos should be enclosed for each speaker and, in case of online event, several screenshots of main speakers and audience should be enclosed to the follow up report.

Qualify your audience in numbers (nr. of participants) and by segmenting the typology of the stakeholders (i.e. 5 business supporting organizations representatives, 20 regional public authority representatives, 10 national public authority rep., 10 students etc.).

In the specific framework of the workshops foreseen in the WP 5 we suggest to considering as minimum element for the section of **Speakers speeches, brief summary and conclusion** the following elements (or include these elements in the minutes of the event if you prefer):

1. Speakers speeches (name, profession, role / experience, competence) including moderator if is present (name, profession, role / experience, competence)
2. **Information, knowledge and dissemination:** Contents and themes presented and discussed with indication of speakers (name surname if possible) about:
 - *Presentation about the activities on topic of restoration actions supporting endangered species for act. D.5.2.1;*
 - *Presentation about the activities on topic of integrated coastal/marine management systems for the D.5.3.*

3. **Inputs and suggestions by the stakeholders and participants**, with a brief explanation about the inputs of stakeholders involved, their proposals, etc.
4. **Evidence if the inputs and suggestions (point above) are been/will be taken into consideration** and explain, if possible why yes or why not .
5. **Results and conclusions** (what was worked out during the workshops and inputs in case for further or next activities).

Here below the template that you have to use for reporting the workshops, as indicated above: it is also available in the **Repository CASCADE / WP 5 / ACT. 5.2 & ACT. 5.3 Workshops reports folder**

<https://drive.google.com/drive/u/2/folders/1zq6tkCEUNLwcDcIQ0QWEufYHxfnhEWmO>

Upload the reports on Cascade Repository

After the preparation of report about workshop, upload the document in **Repository CASCADE / WP 5 / ACT. 5.2 & ACT. 5.3 Workshops reports folder**

https://drive.google.com/drive/u/2/folders/1d7_1n9GC2-8sU7A4N5MPVykYdYp1ynZD

please when you upload the workshop report, create a specific folder with your partner name and put the report inside).

Event follow up report

Work Package:	5. Pilots for endangered species restoration and Integrated coastal/marine management system
Activity	5.2 - Restoration actions supporting endangered species 5.3 – Integrated coastal/marine management systems
Deliverable:	5.2.2 - Organization of 2 workshops for each Pilot Area 5.3.2 - Organization of at least 2 workshops (also virtual) for each Pilot for stakeholders engagement (at least 15 for each workshop) and capacity building on integrated coastal/marine management systems

Project Partner:	PP8 Delta2000 in coordination with other PPs involved in the Pilot Area actions: PP1, PP6, PP7
Name of event:	Workshop Foce Bevano - Pollution from micro - and macroplastics at sea
Date:	Friday 18 TH September, 9.30 AM
Event type:	Workshop
Event venue:	Cesena3co - Cesena3co Mare3me Museum, Via Armellini 18
Short description of the event:	Workshop on the topic of pollution from micro- and macro-plastics at sea, with an analysis of the situation and interventions carried out in the Adriatic. The workshop dealt with both the issues relating to site monitoring and its management. This in line with restoration actions carried out in Pilot Area and system of management of the Area.
Speakers speeches, brief summary and conclusion:	In agreement with the partners the original program of the event has been modified due to a late response of the school involved, leading to the organization a workshop inside the structures of the Cesena3co Mare3me Museum addressed to the students of the high school ISS Tonino Guerra of Cervia. The two classes and their teachers attended the workshop dedicated to the topic of pollution from micro- and macro-plastics at sea. The first part of the event saw the intervention of Fabrizio Caruso, expert in fishing and aquaculture of Coop M.A.R.E. of Calabria, who first of all introduced the theme of plastic at sea and then presented the situation of the Adriatic sea and described the interventions carried out along the coast of Emilia-Romagna. The second intervention was held by Maurizio Pascucci, expert in environmental monitoring of coastal marine waters and biological laboratory analysis of ARPAE Emilia-Romagna, who gave to the participants a deeper insight on the work of monitoring, study and research of marine environments. In this regard, the important role of the Daphne oceanographic structure was presented. After a small break and a transfer to the Cesena3co's harbour, the chance to step aboard the Daphne for a guided tour of its structure and laboratory. This was a valuable opportunity for them to really appreciate also the more practical side of the marine sciences and research activities. Both the interventions of the experts and the tour of the Daphne were faced with pleasure and enthusiasm by the participants.
Role of CASCADE partner in the event:	Delta 2000 Coordinated the event and organized; Arpaee Emilia Romagna provided speakers and guide for the visit to the oceanographic boat (Daphne)

Type of audience/ target groups involved:	Students, ci3zen
---	------------------

Target groups (AF Section F)	Target groups reached in this event	Details of involved target
General public	39	Two classes of the school ISS Tonino Guerra di Cervia, for a total of about 50 par3cipants among students (aged between 14 an 18 years old) and accompanying teachers (n.39 pax)

Event follow up report

Work Package:	5. Pilots for endangered species restoration and Integrated coastal/marine management system
Activity	5.2 - Restoration actions supporting endangered species 5.3 – Integrated coastal/marine management systems
Deliverable:	5.2.2 - Organization of 2 workshops for each Pilot Area 5.3.2 - Organization of at least 2 workshops (also virtual) for each Pilot for stakeholders engagement (at least 15 for each workshop) and capacity building on integrated coastal/marine management systems

Project Partner:	PP8 Delta2000 in coordination with other PPs involved in the Pilot Area actions: PP1, PP6, PP7
Name of event:	Workshop Sacca di Goro - Integrated coastal zone management: aquaculture and ecosystem in the Sacca di Goro
Date:	Thursday 17 TH September, 3.00 PM
Event type:	Workshop
Event venue:	Sealogy Fair Ferrara
Short description of the event:	Workshop aimed to present the issues for restoration and integrated management and innovative models for a sustainable coexistence between man and environment. Spatial information systems for coastal zone management, with particular reference to fisheries and aquaculture. The workshop dealt with both the issues relating to site monitoring and its management.

Speakers speeches, brief summary and conclusion:

In agreement with Delta 2000 the original project of the workshop was modified: in order to reach more public and give the highest visibility to the event it was organized within the context of the exhibition Sealogy in Ferrara. Indeed Sealogy promotes and enhances the protection and safeguarding of the marine ecosystem and sustainable development, with conferences, demonstrations and showcases related to the Blue Economy. With the collaboration of **Lorenzo Marchesini**, president FLAG Coast of Emilia-Romagna, and the kind participation of **Piergiorgio Vasi** on behalf of Regione Emilia-Romagna, the workshop saw the intervention of experts to discuss the topic of "*Integrated coastal zone management: aquaculture and ecosystem in the Sacca di Goro*". **Giuseppe Castadelli** - Professor of Università degli Studi di Ferrara - presented the project *LifeAgree, a model of cooperation between public and private parties for sustainable aquaculture and the protection of lagoon ecosystems*.

Fabio Fiori - expert in fishing and aquaculture of Coop M.A.R.E. of Cacciala - held a discussion on *offshore wind generators issues and opportunities*.

Vadis Paesanti - managing director FLAG Costa Emilia-Romagna - unveiled *the new perspectives and opportunities of fisheries and aquaculture in the area of Sacca di Goro*.

In accordance with the partners and in order to give more visibility to the project the exhibit on Foce del Bevano was displayed to the public the occasion of the Cascade Workshop Sacca di Goro - Integrated coastal zone management: aquaculture and ecosystem in the Sacca di Goro - organized within the context of the exhibition Sealogy in Ferrara. The project has led to the creation of six totem upon which are articulated the four main topics of the information path:

- The marine ecosystems of the territories, habitats and the consequences of climate change suffered and produced by the sea
- The historical, economic and cultural importance of the sea in the areas of interest
- The risk of pollution of the sea and its effects on the environment and human life, with particular reference to plastics at sea, one of the most urgent environmental problems to be tackled due to its gravity
- Integrated management and innovative models for a sustainable coexistence between man and sea

Through informative texts are given all the main notions and curiosities, supported and enhanced by images and photographs, to guide the visitor through the discovery of the mouth of the river Bevano and its valuable ecosystem.

Moreover there is a subsection of each totem dedicated to little ones, to allow also children to enjoy the exhibit. On this purpose it was created "Bevanella", a cartoon mascot resembling the shape of the river, who guides children among the themes and informations using the simple and accessible language and visual of a comic strip.

In order to be as inclusive as possible the exhibit has been provided of qr codes from which it is possible to access the texts declined in CAA version, Augmented Communication Alternative, allowing also people with visual impairment to appreciate the exhibit.

Role of CASCADE partner in the event:

Delta 2000 coordinated the event and acting through the external service of Atlan3de

Type of audience/ target groups involved:

Local and Regional Authorities, general public, experts, SMEs, associations

Un nuovo equilibrio è possibile?

L'operazione più urgente e sicuramente avviata che lo Stato Puglia ha oggi è quella di salvare la natura fiume, si cittadini e le dà il tempo occorre impedire che qualcosa peggio accada per l'ecosistema già così fragili.

Le 1000 ha di foce del Po sono state protette dal 1923. L'area di Foce Umano è stata protetta dal 1970. Il parco nazionale del Delta del Po, quando è stato istituito nel 1986, è stato classificato come Zona di Protezione Speciale.

Per difendere dalla marea di marea, oggi le stagioni passano sempre più veloci e gli effetti delle mareggiate sono sempre più drammatici. Per questo è importante:

- promuovere, grazie ad azioni di formazione e coinvolgimento, la cittadinanza nella difesa e nei servizi di questi luoghi;
- preservare, scegliere i più adatti interventi sulla vegetazione e sull'habitat, in modo da evitare l'annientamento dei loro ecosistemi;
- proteggere, grazie a un approccio aperto alle tematiche che riguardano la vita quotidiana.

Promuovere il ruolo centrale della Citizen Science

Prima di raggiungere questi risultati, avviene da discutere con chiarezza sulla natura dell'acqua e delle specie ospiti e considerare cosa la popolazione locale intende per cui i interventi ambientali possano sia semplicemente che no.

Infine, bisogna fare affari con le autorità nelle canali d'informazione tradizionali. Da qualche anno su tutta Italia prendendo sempre più piede la Citizen Science, termina con un grande successo. Oggi, infatti, non solo un gran parte degli Azi si fanno aumentare la capacità di ricerche di ottenere dati sui territori veriti e su un mondo (il clima) il più cambiante.

Dai primi anni Novanta possono fluire grandi quantità di dati e informazioni. Al contrario, questa particolare risorsa di ricerca ha la capacità di coinvolgere direttamente i cittadini, che costituiscono una parte attiva del processo conoscitivo assicurando che i dati siano anche il rapporto alle stazioni di cultura e a quelle, invece, da mettere in campo. Ma quel giorno si sono impostate le stesse proposte per tutelare l'area di Foce Umano?

Proteggere: grazie alla legge

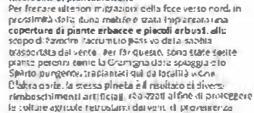

Proprio come gli altri fiumi della nostra regione, il Po è stato oggetto di molte iniziative di protezione e conservazione. Oggi, grazie alla legge sulle Zone di Protezione Speciale, è possibile garantire una maggiore sicurezza per le specie animali e vegetali.

Preservare: aiutare la natura in difficoltà

Dopo aver così l'area fiume tutela, è stata possibile intervenire per proteggere gli uccelli lungo il corso del Po. In questo caso, è stato possibile garantire la continuità del territorio, in grado di fornire una connivenza tra uccelli e ambienti profondi per entrambi.

Interventi sul tratto terminale del Po

In meno di un decennio, dal 1978 al 2008, a causa dell'elevata siccità di sei mesi la foce si è spostata ogni anno di circa 90 m verso nord, fino a rimanere a 500-600 m dalla posizione originale. Questo spiegherebbe perché, a partire dal 1990, circa 150 ha di sabbia e di piave della piana costiera, indebolendo l'arena di protezione normale della foce retrostante.

Dopo intensi studi, nel 2008 si decide di intervenire con due nuovi interventi nel tratto terminale della foce: il recupero del fiume e il balzare�al.

Interventi di pianificazione

Per fare le ultime integrazioni nella foce verso nord, in prossimità della foce, dove sono impostate una cappella di piante erbacee e piccoli erbusci, alle spese di favorevole accumulo può via della sabbia trasportata dal vento. Per far questo, sono state spostate parte delle piante e dei cespugli di sabbia e sottoposte a semina con semi di piante che crescano.

D'altra parte, la stessa pioggia è risultata di diversi rimbombamenti artificiali, così 2220 alberi di proteggere la collina artificiale retrostante la foce. Il programma inoltre prevede la creazione di una struttura di protezione per favorire le connessioni fra gli habitat e mitigare la frammentazione dovuta alla presenza antropica sul territorio.

Interventi di protezione

Per difendere l'ambiente acqueo, già da tempo, è stata realizzata la diga di quattro km di lunghezza di circa 100 m e dall'altezza di circa 10 m, in quanto parte integrante della Riserva Naturale dello Stato. Il tratto terminale del Po è stato classificato come Zona di Protezione Speciale.

Interventi di salvaguardia

È stato possibile salvaguardare la sabbia e le dune di sabbia naturali che prima proteggevano tutta la zona di corso concesso, sia apposta per il prossimo futuro/l'istituzione di un'area marina protetta, frutto di una gestione in linea con i migliori principi conservazionisti.

Riparare le aree con scarsa biodiversità

Infine, per gli aree con scarsa biodiversità, sono state create aree specifiche per incrementare la ricchezza di piante endemiche. In queste aree sono state piantate piante endemiche come la melica, la cipolla e la cicoria.

Ogni specie di piante ha un suo ruolo e funzione essenziale, quindi è fondamentale che venga protetta una intera catena di relazioni tra le diverse specie.

Event follow up report

Work Package:	5. Pilots for endangered species restoration and Integrated coastal/marine management system
Activity	5.3 – Integrated coastal/marine management systems
Deliverable:	5.3.2 - Organization of at least 2 workshops (also virtual) for each Pilot for stakeholders engagement (at least 15 for each workshop) and capacity building on integrated coastal/marine management systems

Project Partner:	LP-Regione Puglia
Name of event:	THE ROAD TO RECOVERY
Date:	17 January 2023
Event type:	Organized event. Webinar
Event venue:	Online
Short description of the event:	<p>On January 17th the third workshop of the CASCADE Project called "THE ROAD TO RECOVERY" took place. It is dedicated to stakeholders who are interested in integrated Ecosystem Management, protected areas planning and management. The workshop provided a training session on the skills development about the marine coastal systems management and presented best practice examples on valorization, sustainable promotion and adaptive management of the Torre Guaceto protected area and on the correct management of PAs for the safeguard and protection of biodiversity.</p>
Speakers speeches, brief summary and conclusion:	<p>Dr. Rocky Malatesta and Dr. Alessandro Ciccolella, president and director of the "Consorzio di Torre Guaceto" respectively, discussed about the sustainable enhancement and promotion of the Torre Guaceto reserve and the adaptive management of the Torre Guaceto protected area.</p> <p>Successively, Dr. Luana Mia Pirelli, City Councilor with responsibility for Animal Welfare for the City of Brindisi, talked about the proper management of PAs for the preservation and protection of biodiversity.</p>
Role of CASCADE partner in the event:	<p>The LP organized the event and the Communication Manager, Dr. Maria Nilla Miccoli, opened the describing objectives, activities, pilot areas, Croatian and Italian partners are described in details.</p> <p>Any further detail is http://cascade.commediasrl.it/it/eventi/project-workshop-iii-the-road-to-recovery</p> <p>The events is online at the link https://www.youtube.com/watch?v=ZaxscQ95PP8&t=1009s</p>

CASCADE, un ciclo di webinar sulla salvaguardia degli ecosistemi delle aree protette

Dal 29 novembre

Al via, il 29 novembre, il ciclo di webinar del Progetto CASCADE. I primi due incontri intitolati "LET'S MAKE SPACE FOR SPECIES" sono dedicati allo sviluppo delle competenze in merito alla *soft restoration* e delle capacità di recupero delle specie, con particolare riferimento all'area pilota del Progetto comprendente Torre Guaceto, Canale Reale Punta della Contessa e Melendugno.

Nella seconda sessione, gli incontri dal titolo "THE ROAD TO RECOVERY" saranno incentrati sulla gestione Ecosistemica integrata e supporto per decisioni condivise, informate e in tempo reale su pianificazione e gestione delle Aree Protette.

Il progetto, finanziato dal Programma di cooperazione Interreg Italia-Croazia, coinvolge, sotto la guida della Regione Puglia, 19 partner - istituzioni pubbliche, università, centri di ricerca e organizzazioni ambientaliste - provenienti dai due Stati che si affacciano sull'Adriatico.

Nel corso di tre anni, Cascade punta ad aumentare i livelli di conoscenza e studio sulla vulnerabilità degli ecosistemi interni, costieri e marini in Italia e Croazia con l'obiettivo finale di proteggere le specie in pericolo e supportare la gestione integrata dei territori.

Nell'ambito del Progetto, il ciclo di Workshop è un importante spazio di condivisione di casi di studio e di informazioni essenziali per supportare azioni efficaci per affrontare a livello transfrontaliero la vulnerabilità ambientale, la frammentazione e la salvaguardia degli ecosistemi.

LA PARTECIPAZIONE È GRATUITA E PERMETTE DI CONSEGUIRE, PER OGNI WEBINAR, 2 CFP PER GLI ARCHITETTI. RICHIESTI CREDITI APC PER GEOLOGI.

I WEBINAR DI CASCADE: UN NETWORK PER IL MARE

La presenza di oltre 550 partecipanti al ciclo di webinar del Progetto CASCADE è la conferma della straordinaria attenzione per il territorio, della rilevanza della gestione ecosistemica integrata e della pianificazione per preservare le aree protette.

Con ventuno relatori che hanno portato l'esperienza delle Università di Bari, Salento, Bologna e Venezia, con i rappresentanti dei partner e degli Enti coinvolti da CASCADE, i sette appuntamenti hanno proposto una panoramica completa degli aspetti amministrativi, delle applicazioni tecnologiche e dei percorsi tecnico scientifici necessari per assicurare il futuro delle aree protette e del pianeta.

Nelle diverse date, sono stati proposti approfondimenti sui temi della *soft restoration*, delle capacità di recupero delle specie, sulle attività tecnico-scientifiche svolte nelle aree marino-costiere delle aree di progetto rappresentate dalla laguna Veneta, dall'area di Goro, dall'AMP di Torre Guaceto e d'area marina di Salina Punta della Contessa.

Con CASCADE, è stato proposto uno spazio dedicato a tutti coloro che sono coinvolti nella pianificazione e gestione delle aree protette per analizzare e definire metodologie e strumenti necessari a garantire la gestione dei sistemi marini costieri.

Con CASCADE è stato promosso un network interdisciplinare per preservare il mare e l'ambiente in cui viviamo.

The screenshot shows a news article titled "CASCADE PROJECT'S WEBINAR" published on 23/02/2023. The article discusses the success of the Cascade Project's webinar series, highlighting the participation of over 500 participants from various universities and institutions across Italy and Croatia. It emphasizes the interdisciplinary nature of the project, covering topics like soft restoration, species recovery, and coastal marine systems management. The article concludes by encouraging readers to visit the project's website for more information.

CASCADE PROJECT'S WEBINAR

[BACK TO ALL NEWS](#)

A NETWORK FOR THE SEA

The presence of more than five hundred and fifty participants at the series of webinar of CASCADE Projects is the confirmation of the extraordinary attention to the territory, of the importance of both the integrated ecosystem management and the planning for protected areas preservation.

Thanks to the 21 speakers, who have shared the experience of the Universities of Bari, Salento, Bologna and Venezia, and the representatives of partners and institutions involved in CASCADE projects, the seven appointments have spread a comprehensive overview of administrative aspects, technological applications and technical-scientific paths necessary to ensure the future of both the protected areas and the planet.

On the various dates, they have provided in depth-studies in the fields of soft restoration, species recovery capabilities, and technical-scientific activities carried out in the marine-coastal areas of the project such as the Venetian lagoon, the Goro area, Torre Guaceto MPA and the Salina Punta della Contessa marine area.

Together with CASCADE, it has been presented a space for all those who are involved in the protected areas planning and management, in order to analyze and define both the methodologies and the tools necessary to ensure the coastal marine systems management.

With CASCADE, they have promoted an interdisciplinary network to preserve the sea and the environment in which we live.
