EVENT DESCRIPTION

Because of the current pandemic situation in the country unfortunately we were forced to organize local event on – line.

Event started with the presentation held by dr.sc. Ivan Guttler who was focused on RESPONSE project introduction. Dr.sc. Hrvoje Mihanović presented meteorological and oceanographic stations installed within the project RESPONSE, also same stations installed within the scope of other Interreg projects by IOF, and parameters measured on the stations. Also, he described how climate changes could be and are monitored.

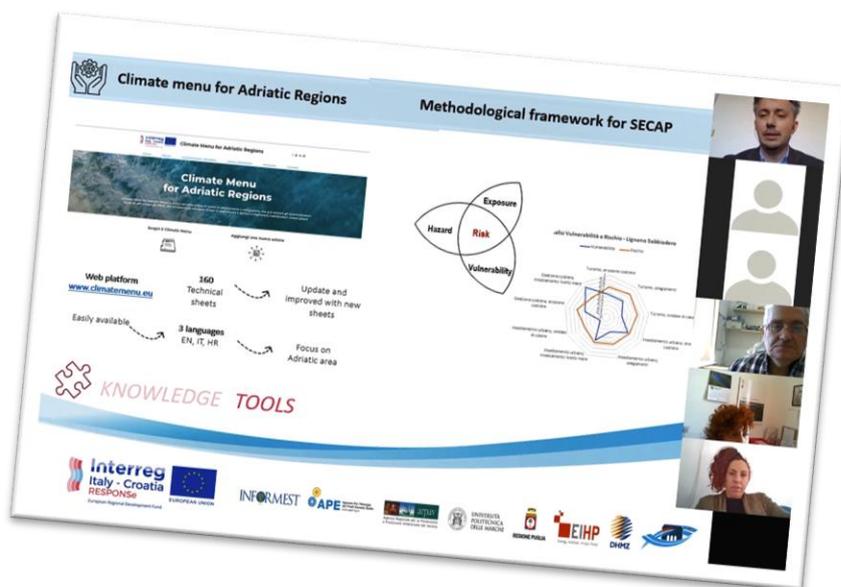

3rd presenter, David Udovičić was talking about field research by research vessel BIOS DVA.

He offered a historical overview and overview of the parameters measured and samples taken from the vessel with emphasis on the work scope of institutional laboratories.

The last presentation was held by dr.sc. Jakov Dulčić, who was talking about climate change, how it affects Adriatic fish population and what are the new, non-native species in the Adriatic Sea.

After the presentations, a short discussion was held after which the local event ended.
