PROJECT DESCRIPTION

The project aims to improve local climate change adaptation capacity in Adriatic region by creating an **information platform** that provides access to **guidance, data** and **tools** that will help local authorities to take adequate policy measures and develop plans to increase resilience in urban and coastal areas.

FOUR MAJOR ACTIONS OF THE PROJECT:

- **Harmonization** and improvement of available climate related knowledge and production of **dataset and projections** for detailed information on climate – related impacts in the region, shaped into format for decision making process;
- **Creation** of climate **information system** and **knowledge platform** for the Adriatic region with best practices, guidance documents, legal frameworks and climate and vulnerability studies;
- **Test** and **integration** of the knowledge platform in Croatian and Italian pilot cities and extended urban areas, where **adaptation** and **resilience** plans will be designed;
- **Dissemination** of the information contained in knowledge platform as a region specific repository for climate policy and plans, which provide support and locally relevant data for follower cities.
