Work Package Number	2
Work Package Title	Communication Activities
Activity Number	2.3
Activity Title	Awareness campaign
Partner in Charge	MUNKA PP5
Partners involved	MUNKA PP5
Status	Final
Distribution	Public

The title and contents of this Deliverable are the same as the deliverable 5.1.7. Design of clear understandable signage systems with clear, useful information that enables proper responses.

In this delivery, an informative permanent board of the PMO-GATE project was made and delivered.

It is installed in the center of Kaštel Kambelovac as a pilot location in the immediate vicinity of the coast.

The board is informative to introduce residents and passers-by to the PMOGATE project as well as the WAVES application.

The project features as well as details from the proposed template are placed on the board. We have included a QR code for IOS and Android systems so that users can download the application and get additional information and monitor the sea level.

The WAVES SEAFRONT MONITORING monitoring system is briefly described. Below we attach a couple of photos of the installed board:
