

D4.3.3 Pilot cross visit in Grado

24/11/2021

D433 Pilot cross visit in Grado

On November 24, 2021, was held in Grado (GO) the pilot cross visit related to the pilot action on Grado 2 underwater site to be organized in benefit of the project partnership and the participants of the works in the other two sites interested by pilot actions (Torre Santa Sabina - Puglia and Resnik/Siculi - Croatia).

The visit, previously foreseen to be done during the same underwater works, was then deferred due to period of the executed works – summer season (August & September) – that made it difficult to organize in a seaside resort for logistic reasons, giving the hotels a clear preference to tourists. Some partners (it is the case of archeologists from the Ca' Foscari and Salento Universities) were already involved in the site activities. Moreover, some other archeological/underwater experts were unable to take part at the visit being on work in the other sites.

Therefore, it was suggested to the partnership to delay the organisation of the visit until November, period in which would be held the project Thematic Meeting exactly in Grado, proposing them in the occasion a **virtual visit** presenting a video that has been recorded during the summer works.

In the organized in site visit in Grado on the morning of November 24, LP ERPAC and its archaeologists presented the results of the excavation and conservation works on the site. PP1 Ca' Foscari University introduced the presentation and browsing of UnderwaterMuse portal (<http://mizar.unive.it/underwatermuseumap/>) and proposed a virtual Immersion (with Oculus VR headset) on Mattoni wreck (Lido - Venice Lagoon) and on Grado 2 Roman shipwreck. Present partners were directly involved in such experience.

At the end of the session, partners were offered a guided tour of the old Grado city and its archaeological and historical heritage with a visit to the Basilica di S. Eufemia, the Basilica di S. Maria delle Grazie and Piazza B. Marin archaeological area.

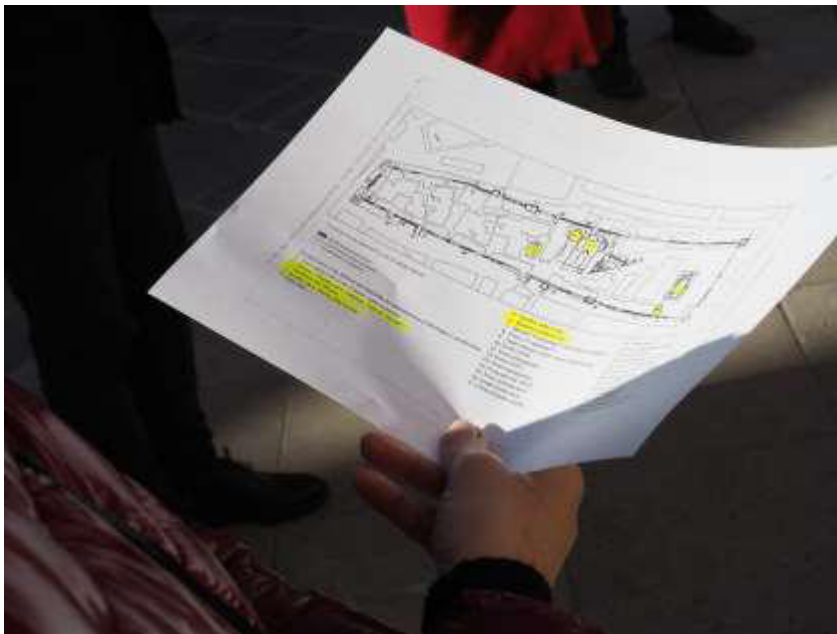

The Visit involved 15 among partners and partner experts and archaeologists.
