

Roll-up / Noticeboard: to be displayed at
strategic places of each PP's premise

Activity 2.1 – Start-up communication activities
WP2 - Communication activities
SUSHI DROP project (ID 10046731)

Final Version of 30/06/2019

Deliverable Number D.2.1.5

Project Acronym	SUSHIDROP
Project ID Number	10046731
Project Title	SUstainable fiSHeries with DROnes data Processing
Priority Axis	3
Specific objective	3.2
Work Package Number	2
Work Package Title	Communication Activities
Activity Number	2.1
Activity Title	Start-up communication activities
Partner in Charge	PP2 – Marche Region, Fisheries Economy Department
Partners involved	PP1 - Institute of Oceanography and Fisheries (IoF), PP3 – Fisheries Local Action Group Costa dei Trabocchi, PP4 – Association for nature, environment and sustainable development (SUNCE), PP5 – Split and Dalmatia County
Status	Final
Distribution	Public

Abstract

SUSHI DROP Sustainable fiSHeries wIth DRONES data Processing is a project financed by European Union through the Interreg Italy-Croatia Programme. The project aims at enhancing knowledge on accurate and non-invasive methods for mapping the marine ecosystems of Adriatic Sea, in order to assess environmental status of habitats and fish stocks population as reliable and up-to-date information about the state of marine resources are essential to support sound management decisions.

The most important goal of SUSHI DROP is to better understand the sensitivity of the habitats to fishing pressures and to design and implement more effective marine management plans. SUSHI DROP evaluates the adoption of drones (UUVs - unmanned underwater vehicles) equipped with sensors to monitor physical, chemical and biological features. In particular, acoustical and optical technologies will be employed as a non-invasive mean to assess fish stocks population.

The findings of the opto-acoustic surveys will be compared with classical procedures based on fish sampling and to assess the accuracy in deriving single-species abundance indices (in numbers or weight) for direct input into stock assessments. The data gathered during the project will be collected in a Geographical Information System known as GIS.

It will serve as an open database for collecting, maintaining and sharing the scientific data acquired by the UUVs and as a useful resource in further research and preservation of the biodiversity of the Adriatic.

The partnership of the project has been able to pool all skills and competences of relevant institutions in order to achieve the set of project results, having the capacity to create strong links to target groups addressed by the project.

This document is the deliverable **Project D.2.1.5 Roll-up / Noticeboard** aimed to give evidence of the project noticeboard or roll-up displayed at strategic places of each partner's premise.
