Managed use of treated urban wastewater for the quality of the Adriatic Sea

Programme 2014 - 2020 INTERREG V-A Italy - Croatia

Description

Description (EN):

AdSWiM project is built around the Urban WW and depuration plants and it aims of assessing whether the treated UWW from DP, in EU limits of composition, can be used as controlled points of nutrients supply, in particular phosphorus, with eliminated risks for both the hygienic quality of the bathing water and the ecosystem stability. This goal is obtained through several well defined activities either at DP level or in

Expected Outputs (EN):

Definition of a set of shared policy in water management and quality objectives. This result is obtained from comparison between legislative framework to the programming documents at local, regional, national and Community levels. The strategy is completed with the joint elaboration of proposals for legislative action. The activity is complete with the realization of training modules aiming to disseminate the project results
