

DIGSEA

DIGitalisation of multimodal transport in the Adriatic SEA

Clustering knowledge on ICT for the improvement of the whole supply chain

PROJECT DURATION
01/04/2022 - 30/06/2023

ERDF
509.515,50

TOTAL BUDGET
599.430,00

Maritime transport is the most sustainable way of transporting goods, but the fragmentation of the supply chain hinders the potential it offers. DIGSEA project clusters the technical knowledge of several Interreg IT-HR 2014-2020 projects that deals with ICT applied to maritime and multimodal transport. The collected knowledge will be consolidated in a single sea-port-hinterland-logistics approach, covering the whole supply chain.

This way, the experiences and expertise of the current programming period will serve as a basis for the new one, ensuring their long-term sustainability and replicability. The mission of the project is to transfer knowledge and raise the awareness of the use of ICT as a powerful and efficient tool to improve the efficiency and consequently the environmental performance of ports and the whole supply chain.
