Report on the D2.1.3 Public presentation at CREATE final conference

On the 14th June 2023 Sabina Susmel from the University Of Udine (LP) presented the HATCH project at the Final Conference of the CREATE project which was held in Venice. The Agenda, the invitation are in attached. CREATE project put the attention on the climate changes and one of the topic was MSP as one of the key tools that will need integration with climate adaptation planning. So this very interesting was the discussion among participants

A total of 30 participants attended the event, of which representatives of target group Local, regional and national public authorities, representatives of target group Associations, innovation and environmental agencies, representatives of target group Education and training organizations as well as universities and research institutes as several students were present at the conference both from IT and Croatia. Unfortunately the organizer was not able to provide in due time the participants list.

The Agenda is here attached

CREATE Final Conference Responding to climate change: how to adapt and build solutions in the Adriatic area

Venice, 14th of June, 2023
Agenda

9:00 – 9:30 Registration

9:30 Presentation of the project and its achievements

The Final conference of the project **CREATE – “Climate Responses for the Adriatic Region”** presents an opportunity for putting hands on how the knowledge collected can be used by local actors for increasing climate resilience on both sides of the Adriatic. The CREATE Toolbox which collects recent knowledge, instruments and guidance on climate change adaptation will be presented as one of the key project results, developed based on the analysis of knowledge collected from recent INTERREG projects and experiences with local climate adaptation projects in the Adriatic area. In particular, during the conference, the award ceremony of the A3-Adriatic Adaptation Award for good practice will take place.

The A3-Adriatic Adaptation Award invited for the submission of adaptation solutions developed and implemented in the Adriatic area. It aims at providing visibility to the best implementations, showcasing good practices and encouraging replications of actions which can enable the Adriatic Region to thrive under a changing climate.
